

SOFTWARE

BENEFITS

WHAT CAN CompareView SOFTWARE DO FOR YOU?

Depending on your professional needs, we offer two different software options to enhance the digital experience and provide a comprehensive overview for your customers.

**** CompareView is a Windows only software program. ****

CompareView Basic is an easy to use but powerful software program for multiple on-screen image comparisons, client-project management and basic image editing. CompareView Basic works with just about any video camera or video camera microscope for displaying live video and capturing digital still images.

CompareView Hair assists users with image analysis for alopecia, hair density, and hair width. This data helps determine the condition of the client's hair and scalp and helps track individual progress for improving their condition. Applications include hair restoration, hair replacement, as well as hair and scalp care product sales. CompareView Hair assists users with image analysis for alopecia, hair density, and hair width. This data helps determine the condition of the client's hair and scalp and helps track individual progress for improving their condition. Applications include hair restoration, hair replacement, as well as hair and scalp care product sales.

FEATURES & BENEFITS

- Increases the opportunity for hair and scalp care product sales with dramatically magnified images
- Tracks hair restoration/replacement progress with image archiving and report archiving
- Ability for live image display and image capture using most video cameras and video camera microscopes
- Compare up to 16 images on screen with custom positioning
- Keep images and data organized with the simple Client Folder feature
- Report features, track images, data analysis, and notes as you work; display then save reports for future reference
- Report comparison shows two reports side by side
- Hair analysis feature helps determine alopecia hair loss level, assists in measuring hair density and width averages
- Easy to print and export single images or image groups to other programs
- Basic image editing including calibrated measuring (linear and area), text annotation and drawing tools
- Image Enhancement tools for color, sharpness, exposure, rotation, etc.
- Network capability allows multiple users to access shared data
